KRTP Syrup Testing Services

The KRTP is now offering syrup testing services.

At this time, syrups may be analyzed for % sugar concentration, pH, and titratable acidity using sodium hydroxide (NaOH) to neutralize the sample to pH 6.0, 7.0, and 8.0.

More complex analysis of syrups (e.g., Hydroxymethylfurfural (HMF)) is beyond the capacity of the KRTP but may be done through other labs (e.g., Sweetwater Science Labs).

KRTP Cost = \$15.00/sample

Prior to submitting samples, please notify the KRTP by email or phone that you are wishing to submit samples; then complete the sample submission form on the following page and include the completed form and a cheque made out to the Manitoba Beekeepers' Association along with your samples.

Samples may either be mailed or dropped off to the address above. Please pack and seal samples appropriately to avoid spillage and breakage during transport.

Derek Micholson

KRTP Lead
